To Whom It May Concern,

I am pleased to write this letter of recommendation for **Collins Kimathi Mwiti**, who has served as an Agronomist at UjuziKilimo. During his time with us, he has consistently demonstrated a strong blend of technical expertise, analytical thinking, and a deep commitment to advancing agricultural productivity through data-driven approaches.

At UjuziKilimo, Collins played a key role in supporting farmers through soil health analysis and nutrient management strategies. He effectively translated complex soil data into practical, actionable insights that enabled farmers to optimize input use, improve crop yields, and enhance long-term soil sustainability. His ability to connect agronomic science with real-world application has had a measurable impact on farm performance and resource efficiency.

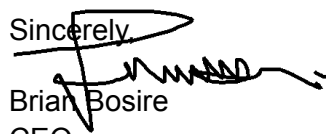

Beyond his core agronomy work, he has shown exceptional strength in project analysis and execution. He approaches challenges with a structured, problem-solving mindset and is comfortable working across different technical environments, adapting quickly to new tools, systems, and field conditions. This adaptability has made him a reliable contributor in both field operations and more technical, data-oriented projects.

He has also been instrumental in delivering technical training to farmers, partners, and internal teams. His communication style is clear, practical, and engaging, making complex concepts accessible to diverse audiences. This has strengthened adoption of best practices and reinforced the value of data-driven agriculture across our network.

Above all, he is committed to delivering high-quality results. He takes ownership of his work, maintains a high level of professionalism, and consistently strives for excellence in everything he does.

I am confident that he will bring the same level of dedication, skill, and impact to any future opportunity.

Sincerely,

Brian Bosire
CEO

UjuziKilimo Solutions.
